

17-Year-Old Ava Toton Expands Audio Software Company 'Avalanche Tones,' with 'Noise Suite' Guitar Plugin

SAN RAMON, CA — Following its debut of Chainsaw Suite, independent audio developer Avalanche Tones has officially released its second guitar plug-in tool, *Noise Suite*. Engineered specifically for metalcore, djent, and thrall production, Noise Suite gives producers and guitarists a dedicated workspace for creating chaotic textures and aggressive sound design elements.

Noise Suite is a modular effects plugin packed with 18 experimental modules, including pitch shifters, frequency shifters, ring mods, tape stop, freeze, glitch delay, and a self-oscillating analog delay. Creators can stack up to 10 modules, drag to reorder their signal chain, and map every parameter to MIDI or DAW automation for complete control.

17-year-old musician, songwriter, and studio producer, Ava Toton, founded Avalanche Tones with the philosophy of building modular, utility-driven software. Noise Suite delivers 18 purpose-built modules that assist in creating chaotic, atmospheric noises and transitions that cut through dense, high-gain mixes.

Ava Toton, founder and developer of Avalanche Tones, on the inspiration behind Noise Suite:

"Noise Suite was created to complement Chainsaw Suite. Chainsaw Suite shapes the tones, while Noise Suite creates the noises, but they can also work independently of each other. This is why I released them so close together. I've envisioned Noise Suite for at least a year, but felt like it might be a bit ambitious for me to be my first release, so I started with Chainsaw Suite to work out the processes. Creating and releasing Noise Suite has been a dream come true.

This is just the beginning for Avalanche Tones. In the future, I'd like to develop cross-genre plug-ins, partner with artists to create signature plug-ins, and perhaps delve into physical hardware such as pedals."

Key Features of Noise Suite

- **18 Modular Effects:** A versatile lineup of pitch shifters, delays, bitcrushers, and other experimental effects.
- **Heavy Genre Focus:** Tailored specifically to complement down-tuned guitars and intense mixes in modern metalcore, djent and thrall.
- **Intuitive Modular Routing:** Chain and reorder modules effortlessly without deep menu-diving.
- **DAW Automation & Integration:** Full parameter automation across modern DAWs for dynamic sweeps and automated transition effects.

System Compatibility & Pricing

Noise Suite is a 64-bit plugin supporting **VST3** and **Audio Units (AU)** formats across macOS and Windows. It is available now at www.avalanchetones.com for \$39.99 USD. A 7 day free trial option is available so artists can test it out in their own sessions before purchasing.

About Avalanche Tones

Founded in 2026 by audio developer, producer and multi-instrumentalist Ava Toton, Avalanche Tones is an independent audio software company focused on building streamlined, high-utility digital tools for heavy music production.
